

We are a team dedicated in providing you and your family with the best quality eye care. We aim to have a successful practice providing the best in vision care, while continuing to educate the community and ourselves.

Our optometrists and staff are trained to:

- treat vision disorders,
- prescribe spectacles,
- contact lenses and
- eye exercises.

We can also detect eye diseases and ocular signs of general medical conditions like diabetes and high blood pressure.

Our service and advice is based on the latest modern health examinations techniques, lens materials and frame designs.

contact lens

contact lenses

At The EyeStore we consider contact lenses our speciality. Our optometrists are experienced in all aspects of contact lens prescribing, fitting and after care, and will assist you to become a successful and regular contact lens wearer.

Whether you want to change your look or just appreciate the convenience of contact lenses, our wide selection of contact lenses including daily, fortnightly, monthly, extended wear, tinted and coloured lenses will meet your needs. We will help you achieve comfort, convenience and the look you require, while ensuring your visual needs are met.

Free contact lens trials are available but fitting fees will apply.

At The EyeStore there is only one person, the optometrist, who is responsible for the performance of your glasses and the management of any problems that may occasionally arise.

The examining optometrist knows exactly what your visual problems are and the purpose for which any prescription is intended.

We have an extensive range of quality frames, including designer brands such as:

Versace, Prada, Gucci, Esprit, Christian Dior, Ray-Ban, Adidas, Marks & Spencer, Orson, Hugo Boss, Rosenbach, Pace & Pace

All our frames come with an exclusive Provision two year guarantee against manufacturer's faults - giving you additional peace of mind. We will also provide free frame adjustments for the life of the frame.

Advances in lens technology has made thick and clattering lens a thing of the past. Our trained staff will assist you to find the right frame to complement your looks and will explain the lens option available to ensure they are appropriate for your lifestyle needs.

Your lenses can also be coated to reduce glare, treated to block out harmful UV radiation, toughened to protect your eyes from injury or tinted to provide prescription sunglasses. These treatments accompanied by new high index material will result in lighter, thinner and more cosmetically appealing glasses.

At The EyeStore we offer full scope optometric services and provide glaucoma testing, computerized visual field testing, colour vision and binocular vision assessment, as well as Children's Visual Assessments, and vision training as well as assistance for low vision training.

For people considering the benefits of laser eyeight correction, we offer detailed counselling and referral to experts in this field as well as air management of your post-operative care if required.

We regularly conduct screenings of children's vision in schools and are available to community groups requiring presentations to their members on any aspects of vision care and eye health.
